

During the past three years Hi-Force has invested a significant amount of money in several “state of the art” Mori Seiki CNC Machines. Our latest addition, a brand new 7 axis machine, capable of machining very complex and critical parts accurately and efficiently, with zero defects time after time, was received in mid 2010 along with two additional turning centres, bringing our total fleet of production machines to 12. Hi-Force is totally committed to manufacturing products of the highest quality, using the best machinery available, to ensure that our products meet the most stringent quality requirements possible, whilst also retaining a competitive price in the global market for hydraulic tools. Our research, development and design office is working hard and continuing to expand, ensuring that our products remain at the leading edge of currently available hydraulic tool technology.

In July 2010 our UK head office relocated to a brand new, state of the art facility in Daventry, UK. Our new home, which is almost three times as big as our previous facilities, has enabled us to combine all of our manufacturing and production facilities under one roof, alongside our sales, marketing, training, assembly, logistics and administration departments. There is no doubt that the huge investment in facilities, personnel, product design and manufacturing capabilities, that we are making today, will see Hi-Force continue to grow at a significant rate over the coming years. With almost 30 years of hydraulic tool manufacturing and technical sales experience in place, we believe that Hi-Force is certainly a company that can be trusted with your current and future demands for hydraulic tools, safe in the knowledge that when you need us we will be ready to support you worldwide, 24 hours a day, 7 days a week, 365 days per year.
